Harry Houdini

Harry Houdini said, “Magic is the sole science not accepted by scientists, because they can’t explain it.” Houdini was very strong and flexible, and he learned how to use his body in his tricks. He had to practice his tricks. He was great magician and escape artist and lived an exciting life.

Harry Houdini lived for fifty-two years. Houdini was born on March 24, 1874, in Budapest, Hungary. He died on October 31, 1926, in Detroit, Michigan. He died from an infection from a burst appendix. He lived a full and successful life.

In 1891 Houdini changed his name from Enrich to Harry. He was the first person to fly a biplane in Australia. During the summer of 1883 Houdini was a trapeze artist in a neighborhood circus.

His first magic show was with his brother. He jumped into the Detroit River, from the Belle Island Bridge wearing handcuffs. Houdini performed the first underwater escape in a theater; his milk can trick. On August 5, 1926, he was underwater in a casket for 90 minutes and won an underwater challenge.

Harry Houdini was a very successful magician. He was a performer from when he was young until right before he died. I learned some magic tricks while I found out about Houdini, but I don’t want to be a magician.
