

## Fractions & Subtracting Weights

A. Color in the shape to show the fraction.

B. Look at the weight of each coin and answer the questions.

Penny 3.11 grams	Nickel 5 grams	Dime 2.27 grams	Quarter 5.67 grams
---------------------	-------------------	--------------------	-----------------------

How many more grams does a nickel weigh than a penny?

$$\begin{array}{r} 5.00 \\ - 3.11 \\ \hline \end{array}$$

1.89 grams

**1.89**

How many fewer grams does a dime weigh than a quarter?

$$\begin{array}{r} 5.67 \\ - 2.27 \\ \hline \end{array}$$

3.40 grams

**3.40**

Two coins have a value of 15 cents. What is the weight difference between the two coins?

$$\begin{array}{r} 5.00 \\ - 2.27 \\ \hline \end{array}$$

2.73 grams

**2.73**

Two coins have a value of 26 cents. What is the weight difference between the two coins?

$$\begin{array}{r} 5.67 \\ - 3.11 \\ \hline \end{array}$$

2.56 grams

**2.56**
