Many scientists believe the world to be millions, if not billions, of years old. Various scientific publications repeatedly state this as fact. However, there are a growing number of scientists who now believe the earth to be much younger than previously thought. Several dating methods have been proven to be inaccurate. Sometimes in science, the best we can do is speculate. Our speculations can coincide with available data, but no one can guarantee that their way is right. Altho some parts of our physical universe can be proven, many continue to be a mystery.
